

HARIS VELIĆ

Full-Stack & Mobile Engineer

Sarajevo, Bosnia and Herzegovina | +387 60 32 10 314 | harisvelic2000@gmail.com
linkedin.com/in/harisvelic | github.com/har1zarD | trainera.fit

SUMMARY

Full-stack & mobile engineer specializing in production TypeScript across web, mobile, and Apple Watch. 3+ years shipping at Shop Circle, plus a fitness SaaS I built end-to-end as a side project (live on App Store, Google Play, and web; now runs autonomously). AI-first by default: Cursor and Claude Code are core to my daily workflow, including custom MCP servers and agent harnesses for end-to-end feature delivery.

EXPERIENCE

Trainera.fit (side project)

Mar 2025 – 2026

Built & shipped solo, end-to-end

Remote

- Built a fitness coaching SaaS connecting personal trainers with clients; shipped training plans, nutrition tracking, progress analytics, messaging, and group coaching end-to-end.
- Lead engineer across the full stack: Next.js web app, React Native + Expo mobile app live on App Store and Google Play, and a native Apple Watch companion in Swift/SwiftUI.
- Integrated Stripe, PayPal, and Apple IAP for subscription billing; built an AI Coach and AI-powered food image analysis using OpenAI and Claude APIs for personalized training and nutrition feedback.
- Implemented iOS Live Activities and Home Screen Widgets for real-time workout tracking; synced Apple HealthKit and Android Health Connect.
- Localized the product to 20+ languages with multi-currency support; CI/CD via GitHub Actions; production deployment on Hetzner.
- The product now runs autonomously with no day-to-day involvement from me; my full focus is my engineering role.

Shop Circle

Dec 2023 – Present

Software Engineer (Frontend Lead)

Sarajevo, BiH

- Frontend lead on TypeScript-based Shopify app development; owned UX, performance, and reusable patterns across multiple production apps serving thousands of merchants.
- Led frontend development for SC Loyalty Rewards, Keystone Loyalty Rewards, and SC Store Locator, all live on the Shopify App Store.
- Architected a reusable Shopify CLI frontend setup now adopted as the baseline across all new Shop Circle applications, reducing project setup time for the team.
- Built performant, accessible UIs with React, Remix, Tailwind CSS, and the Shopify Polaris design system.
- Led the team's agile delivery process: sprint planning, retrospectives, Jira backlog management, and technical documentation.

Ant Colony

Apr 2023 – Jul 2023

Full-Stack Developer Intern

Sarajevo, BiH

- Built RESTful APIs in Node.js with TypeScript and developed React + Tailwind frontends within an agile team under experienced mentors.
- Gained hands-on exposure to software architecture, data security, and accessible interface design.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Swift/SwiftUI, Python, PHP, React, Next.js, Remix, React Native, Expo

Backend & Data: Node.js, GraphQL, REST APIs, Prisma, PostgreSQL, MySQL, Redis

Mobile & Native: React Native, Expo (EAS Build), Swift/SwiftUI for Apple Watch, HealthKit, Live Activities, Home Screen Widgets, Android Health Connect

AI & Tooling: OpenAI, Claude APIs, Claude Code, Cursor, MCP servers, AI agent workflows

Payments: Stripe, PayPal, Apple IAP

DevOps & QA: GitHub Actions, Docker, Hetzner, Sentry, Playwright, Fastlane

EDUCATION

PIM University, Sarajevo - Bachelor of Engineering, Computer Science & Information Technology

2019 – 2023

LANGUAGES

English (Professional) • Bosnian (Native)
